THE DESIGN OF THE CONTROLS

Technology
meets
style

Beautiful and functional, the LivingLight controls take on a new look. The new finishes, the LED lights on all models, and the

brand new mechanism, contribute to solutions capable of meeting all needs with style. The design is faultless and the shapes are more practical and ergonomic.

**AXIAL CONTROLS:
BTICINO INNOVATION**

BTicino introduces the alternative to the more traditional rocker controls. The axial controls are ideal for best taking advantage of the planarity of the new AIR cover plate. A high level offer for a silent and reliable control, thanks to the implementation of the most sophisticated electromechanical technologies.

**ROCKER CONTROLS:
CONTINUITY AND RENOVATION**

Improved performance and appearance for maximum practicality and functionality.

The light

LEDS ALL OVER THE LINE

The light, featured on all controls, is of a refined amber colour, for a suggestive effect that is never imposing. Thanks to the LED technology, consumptions are significantly reduced, following the commitment of BTicino to energy savings.

NEW AXIAL CONTROLS

REDUCED depth,
SUPERIOR ergonomics

THE THINNEST EVER.

The new axial control takes up the least space in the box: - **30% the size of the old axial**

- It is easy to install, in new systems and in refurbishments even **with boxes full of cables**
- it is perfect for installation with ultrathin cover plates and lower (Axolute and Livinglight) AIR supports

Surface-mounted

E.g. screw/plate in low AIR support version

Ergonomic

The performance features of the new axial controls send sensations similar to the activation of an electronic control.

- **Reduction in the travel** for activation - **35%** (2.2 mm instead of 3.5 mm)
- **Reduction in the strength** required for the activation - **40%** (5N instead of 8/9N)
- **Reduction in the perceived noise**: -**18%**
- Optional backlighting with the **new LEDs**

Universal: maximum performance

The new controls – 10 AX Mini Gap (contact distance reduced to 1.8 mm) – are suitable for all types of lamps **by controlling loads up to 2,500 W** and improving performance even in potentially critical situations (e.g. LED strips).

Brightness	220 +	400 +	700 +	900 +	1300 +
LED	4 W	6 W	10 W	13 W	18 W
CFL	6 W	9 W	12 W	15 W	20 W
Halogen	18 W	28 W	42 W	53 W	70 W
Standard	25 W	40 W	60 W	75 W	100 W

Table showing the type of lamp in relation to the relative load according to the brightness produced.

NOTE: The new axial controls make it possible to check loads up to 2,500 W (so 16AX are no longer necessary).

NEW FLAT SOCKET

Beautiful, practical and safe

The **new FLAT sockets**, German/Italian and French/Belgium standard (10/16 Amperes) compliant, **feature a moving front plate** that moves inwards when the plug is inserted.

This feature ensures:

- perfect planarity of the light point also with the German/Italian standard sockets, adding value

to the installation, which will perfectly match the sophisticated and prestigious standards of AIR Axolute and LivingLight

- more practicality because the easy to see holes make inserting the plug easy.

It also perfectly adapts to all types of sockets used in Italy (C, L, F type with straight or 90° cable).

- more cleanliness because dust and grease do not accumulate inside the sockets.

Features

- Body aligned with the controls and the cover plate.
- Movable wall aligned with the body . It goes in when the plug is inserted and realigns when the plug is taken out.
- Backlit holes.
- Earth contacts always protected for greater safety.

LED backlighting of the holes

Appropriate housings at the bottom of the enclosure ensure easy LED wiring. The LED is optional and is available in 4 colours: white, blue, green, orange.

MORE SAFETY

The **FLAT** socket guarantees more safety and protection than all the other sockets on the market thanks to:

- greater distance between movable wall and contacts when the plug is not inserted (the movable wall only lowers when the plug is plugged in)
- safety system which prevents people putting foreign objects into the plug entrance holes
- the movable wall returns to its original position on removing the plug, thus activating the safety system
- earth contacts always protected.

NEW TV SOCKETS

A simple range for advanced performances

OPTIMUM PERFORMANCES AND CONFORMITY

Low attenuation, optimised over the requirements of the EN50083-4 standard (<1 dB in DVBT and Satellite Band). Suitable also for the new television devices in UHD (Ultra High Definition). Reduction of the amplification required for the operation.

All new TV sockets comply with European reference standards (EN 50083-2, EN 50083-4)

Only one code for each TV socket

Simplification: for all the TV sockets, the aesthetic covers are supplied with the engine.

A complete range

The new TV sockets offer is perfectly suitable for different installation modes of a TV system (single home or apartment block) and for the different wiring modes (star or passthrough installations).

New wiring system

- The new wiring system of the TV sockets allows an intuitive connection thanks to the complete opening of the clamp and the direct display of the cable insertion zone.
- Improved efficiency thanks to the clamp shielding in Class A (protection 4G; LTE ready).

Selection guide

SIMPLY select the function (e.g. direct socket, through socket, satellite socket, etc.), without having to worry about the colour of the mechanisms: for the white, Tech or anthracite versions, **the code is always the same!**

NEW INDUCTION AND USB CHARGERS

Faster charging and maximum flexibility for all uses

PUSH&PULL EXTRACTION SYSTEM AND LED LIGHT

The **push&pull** system allows easy extraction of the torch from the flush mounted base. The LED light improves performance: high light intensity and lower consumption.

A UNIQUE CODE FOR 3 FINISHES

The new torch is supplied in a package with a neutral base, to be finished with one of the white, tech and anthracite finish front covers available. This allows managing just one product code, instead of three.

ENERGY EFFICIENCY

Respect for the environment and compliance with the new building regulations, saving energy without compromising on modern life comfort today is possible

Lower consumption, same light performance

Constant 100 W light performance (consumption of 100 W incandescent lamp = 70 W halogen = 17 W LED); **up to 65% savings can be obtained by adjusting the dimmer to 25%.**

ADJUSTING THE LIGHT WITH MAXIMUM EFFICIENCY

With the new universal dimmer, it is also possible to control compact fluorescent and LED lamps, saving up to 65% on electricity.

GREEN SWITCH: ILLUMINATION ONLY WHEN NEEDED

ENERGY SAVING TWO-WAY SWITCH

An innovative and at the same time intelligent control:

works like a normal two-way switch allowing manual switching on and off of the managed load but it can also switch the light off automatically if it is left on. When no movement is detected for 10 minutes this new two-way switch will in fact independently deactivate the load to which it is connected. It is the ideal product in both new systems and when replacing existing controls. Also, it does not require a neutral wire, totally zeroing consumptions when the light is off.

TWO-WAY ENERGY SAVING SWITCH

Two-way Energy Saving switch with presence detector. It works as a traditional 2 way switch (manual ON, manual OFF) but it will automatically turn off the light if it doesn't detect any presence for 10 minutes.

IR detection range, 8 meters, 160° - it is suitable with all type of loads that can be mixed on the same line:

- 12-150W: halogen or resistive loads
- 2-150VA: lamps with electronic or ferromagnetic ballast
- 8-30W (or 650 mA): LEDs or CFLs

Particularly suitable for places where a light can stay switched on for a long time such as garage and cellar, children's room, etc.

No neutral wiring, 127-230V, 2 modules.

TWO WAY ENERGY SAVING SWITCH WIRING DIAGRAM

Two-way energy saving switch

Two-way switch + Two-way energy saving switch

The IR sensor is activated when the light is switched on from one of the two switches. The two-way energy saving can be installed both near or far from the load and it opens the circuit after 10 minutes with no movement detection.

2 Two-way energy saving switches

The IR sensor of the two switches are both activated when the light is switched on. The light will switch off when one of the two switches stays 10 minutes with no movement detection.

EXAMPLES OF LED CONNECTION ON A SWITCH

CONTROL BACKLIGHTING LED CONNECTION

Note for the connection of 230 V.a.c. LEDs for the backlighting of control devices: when LEDs are fitted to help locate the control itself, it must be taken into account that energy saving and fluorescent lamps do not allow in series connection of the LED on the load. It is therefore necessary to also take a neutral conductor near the control, so that the LED may be connected directly between phase and neutral, and will always be on.

CONNECTED HOME

In Italian homes the number of connected products such as telephones, TVs, music players and appliances is constantly growing every year.

BTicino is a main player in this trend, providing several solutions, such as Smarter, connected Salvavita, connected video internal units, the NUVO multi-room audio system, etc.

For the NUVO product list, consult the specific Catalogue.

Smarter CONNECTED THERMOSTAT

X8000

X8000W

Item **CONNECTED THERMOSTAT**

○ X8000

The Smarter connected thermostat, together with the dedicated Thermostat APP, is a device which allows you to adjust and monitor the temperature in the rooms precisely and accurately; all the programming and most of the functions are performed simply and intuitively using the APP.

Thanks to its Wi-Fi connection, Smarter can be programmed and controlled remotely; it can also display the temperature and humidity measured in the room.

The temperature level can be set locally for manual operation and the Boost mode can be activated. The Boost forces the switching on of the system for a limited time (30, 60 or 90 minutes) independent of the measured and programmed temperature.

- Power supply 110 to 240 Vac , 50/60 Hz;
- 2 W max absorption;
- 1 x 1.5mm² maximum cable section;
- Operating temperature 5 to 40 °C;
- Temperature set-point 5 to 40 °C;
- Increase of 0,5 °C;
- 1-contact output in switching free of 5(2)A potential.
- Type of operation 1BU
- Pollution index 2
- Rated pulse voltage 4 kV
- Wireless device in compliance with 802.11b/g/n standard, frequency 2.4 - 2.4835 GHz, transmission power < 20 dBm. WPA/ WPA2 safety protocol.

Installation:

- flush mounted, on boxes item 503E or 500 (for item 500 use the wall dowels)
- plasterboard, on boxes item PB503N and PB502N

○ X8000W

features: as X8000.

Installation: on the wall, using screws and dowels suitable for the installation surface (brickwork, plasterboard, tiles etc.).

ECO MODE

Manual load activation and automatic switch off managed by the dimmer/actuator based on the detection of the presence of people and the desired level of illumination detected by the control, item L4658N. The function of the control is first of all to activate the automatism of the dimmer/actuator: upon first pressure, the sensor compares the desired light level with the actual light level of the room, and ascertains if the light should be switched on or not. A subsequent pressure of the control forces the switching ON or OFF of the automatism determined by the dimmer/actuator.

Notes:

- 1) Power factor corrected fluorescent lamps, discharge lamps.
- 2) Account must be taken of the transformer yield to calculate the effective power of the load connected to the actuator. For example if a dimmer is connected to a 100 VA ferromagnetic transformer with yield 0.8, the effective power of the load will be 125 VA.
- 3) The transformer must be loaded at its rated power and however never less than 90% of this power. It is preferable to use a single transformer rather than several transformers in parallel. For example it is better to use a single 250 VA transformer with 5 50 W spotlights connected rather than use 5 50 VA transformers in parallel each with a 50 W spotlight.
- 4) The symbol on the actuators refers to the rolling shutter reducer motors.

- 2) Account must be taken of the transformer yield to calculate the effective power of the load connected to the actuator. For example if a dimmer is connected to a 100 VA ferromagnetic transformer with yield 0.8, the effective power of the load will be 125 VA.
- 3) The transformer must be loaded at its rated power and however never less than 90% of this power. It is preferable to use a single transformer rather than several transformers in parallel. For example it is better to use a single 250 VA transformer with 5 50W spotlights connected rather than use 5 50 VA transformers in parallel each with a 50 W spotlight.
- 4) The symbol on the actuators refers to the rolling shutter reducer motors.

CUSTOMISABLE SWITCHES

When created using tilting control devices, the light point may be customised using transparent key covers and a transparent cover plate. The cover plate, available in 3, 4, 7, and 3+3 module versions, has a removable under plate that can be removed and interleaved with wallpaper, so that it will not stand out from the wall, or using a favourite pattern or photo, to achieve the opposite effect. The same can be done with the 1, 2 or 3 module key covers.
