

Sectional metering devices

# Product series VPK

For oil and grease

For use in SKF CircOil circulating and SKF ProFlex progressive centralized lubrication systems

## Fields of application

- Metal-forming machinery
- Vehicles
- Construction machinery
- Production systems in the automotive industry
- Packaging and printing machines

## Advantages

- For universal use in continuous or intermittent operations
- Versatile – features metering sections with variable dosing amounts and internal and external consolidation of outlets
- Expandable by attaching directional solenoid valves

- Can be monitored using piston detectors or visual cycle indicators
- Simple to service – separator plates feature vulcanized seals that cannot be detached
- Powerful – max. 20 outlets for volumetric flow of up to 500 cm<sup>3</sup>/min

### Important information on product usage

SKF and Lincoln lubrication systems or their components are not approved for use with gases, liquefied gases, pressurized gases in solution and fluids with a vapor pressure exceeding normal atmospheric pressure (1 013 mbar) by more than 0,5 bar at their maximum permissible temperature.

CAD models for the products shown in this brochure can be downloaded at: [skf-lubrication.partcommunity.com](https://skf-lubrication.partcommunity.com)

Overview SKF progressive feeders, inlet volume

The maximum recommended flow rate values relate to lubricating oil at the highest selectable piston-stroke volume.

# Sectional metering device, product series VPK

## Product description

### General

The sectional metering device VPK, which belongs to the progressive feeder range, is available in the designs VPKM (metric-threaded connectors) and VPKG (inch-threaded connectors). With their metering sections, VPM and VPG cover a metering volume per outlet and cycle of 0.05 cm<sup>3</sup> (T-section) to 0.6 cm<sup>3</sup> (S-section). The inlet of the feeder is located at an inlet section and the outlets are at the downstream feeder sections. The delivery ducts are sealed by elastic seals. An end section is located downstream of the last feeder section. All sections are interconnected with tie-rods. They seal the feeder assembly.

The volumetric flow, which is sent via a tube, is forcibly distributed in a predetermined ratio to the outlets, i.e. to the lubrication points or the downstream progressive feeders. Pistons, which are aligned in series, meter the lubricant for two opposite outlets each and control the function of the neighboring piston. This way, the function of the sectional metering device can be checked by monitoring any piston with a cycle indicator or a piston detector.

### Operation (→ Fig. 1)

The task of the progressive feeder is to distribute consecutively specified portions of the pressure-fed lubricant (grease or oil) to the connected lubrication points.

The discharge of the lubricant continues as long as it is pressure-fed to the progressive feeder. The specified portions are generated through the piston movement. Two lubricant outlets on the two end positions of the piston travel are allocated to each piston.

The number of pistons within a feeder is from 3–10 variable. If lubricant is pressure-fed, the pistons of a feeder move in turn to their end position. The piston movement displaces a portion of the lubricant that is downstream of the piston to the downstream outlet. The movement of a piston can only start after the upstream piston has been moved to its end position. If all pistons are in their left or right end position, internal connecting bores in the feeder ensure a defined and continued running of the pistons.

When all pistons have been moved once to the left as well as to the right end position, all connected lubricant points have been

supplied once with the preset lubricant quantity.

The portions for both outlets are determined by the diameter and the travel of the piston. The selection of the required portion is made during the design of the feeder.

A subsequent change of the portions is only possible through a modification of the feeder.

### Information on the design

The general criteria for the design of progressive feeders also apply without restrictions to the sectional metering device VP. The most important criterion is the number of cycles (stroke rate). They should be held as low as possible by selecting high-volume feeders. Maximum value of 200 cycles/min should not be exceeded

Thus, pressure losses and noise level will also be reduced. In case of an installation on movable machine parts or in case of strong vibrations (e.g. on presses), the piston position of the feeder should not be the same as the direction of movement of the machine part.

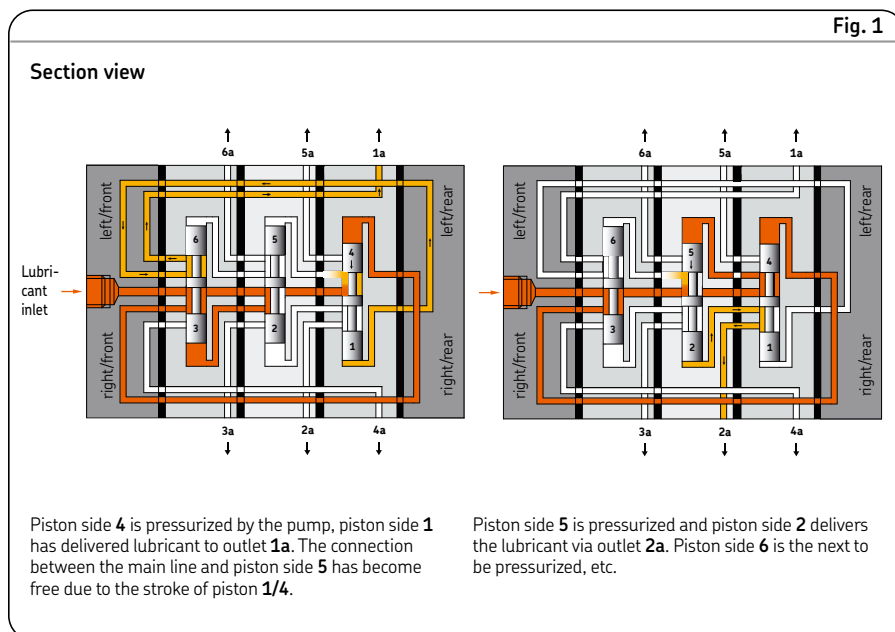

For the VPK feeder, the minimum number of feeder sections is 3 and the maximum number is 10.

### Quantity distribution

Sectional metering devices distribute an amount delivered by a pump to several outlets while the feeder determines the volumetric ratio.

The different output quantities within a feeder are achieved by the use of various piston diameters or the joining of two or more outlets. The indicated lubricant quantities result from the piston diameter and the maximum travel of the piston. Depending on the system design, these capacities may vary by 40 percent.

For the sectional metering devices VPKM and VPKG, sections for two connections (**T** = twin) or for one connection (**S** = single) are available. In case of single sections, the two opposite outlets are connected internally, whereby one outlet is closed.

# Sectional metering device, product series VPK

## Monitoring and attachments

### Tightening torques

During the installation of the VPK feeder, consisting of inlet section, inlet plate, twin and single sections, separator plates as well as end plate and end section, the following tightening torques have to be adhered to for the tie-rods and nuts:

#### Tightening torque

Tie-rod (2x)	each	2,5 Nm
Nut for tie-rod M6 (2x)	each	12,0 Nm

### Monitoring

All standard sections can be monitored directly by means of a piston detector. Furthermore, the piston movement can be monitored by visual stroke monitoring.

Both monitoring models can be used for oil as well as for grease.

### Attachments

The sectional metering device VPK can be equipped with upstream directional solenoid valves for oil.

### Check valves

Screw unions with check valves are recommended when using greases due to the air inclusions caused by production processes.

### Consolidation of outlets (→ Fig. 2)

Two neighboring outlets are joined from the end section towards the inlet section. The plug (order No. **917-006-101**) of the outlet nearest to the end section must be unscrewed and the outlet bore must be sealed with a screw plug. The fluid of the two outlets will then flow out of the outlet near the inlet section.

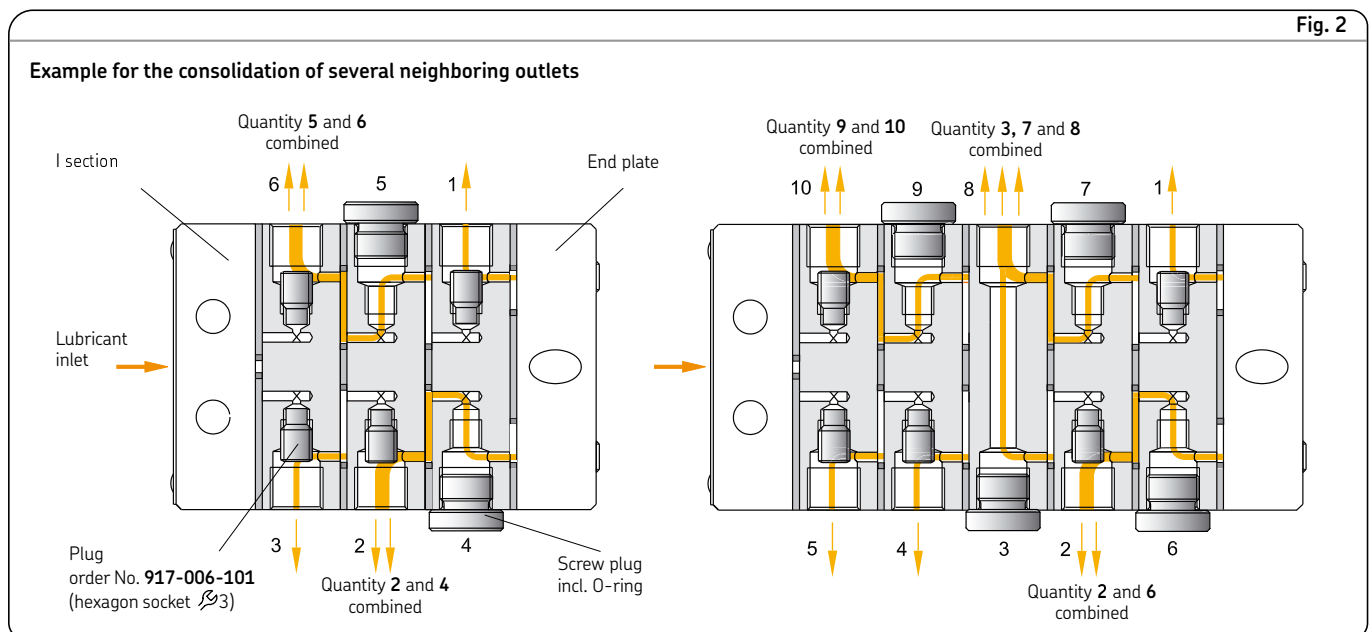

#### Note:

To avoid damages the feeder section behind the inlet section must not be closed!

#### Important!

To avoid damages it is absolutely essential, that the plug (order No. **917-006-101**) has been removed before screwing in the screw plug, otherwise the feeder may block.

This consolidation of outlets can be combined, as long as there is no single section in-between. The single section completes the group formation; a new group formation can only be carried out behind the single section. If it turns out that the fluids of two neighboring outlets have to be separated again (e.g. due to an additional lubrication point), this will be a simple matter. The only thing to do is to screw in a plug (order No. **917-006-101**) and to connect the previously closed outlet to the new lubrication point.

## Monitoring with piston detector and cycle indicator, for oil and grease

With piston detector

With cycle indicator

### Technical data

Basis design → Technical data page 6

#### Piston detector, electrical <sup>1)</sup>

Ambient temperature range . . . . .	-25 to +80 °C
Operating pressure max. . . . .	350 bar
Design . . . . .	4-point LED
Rated voltage . . . . .	10 to 36 V DC
Internal thread . . . . .	M10×1
Weight . . . . .	30 g
Residual ripple (2-pin) . . . . .	3 bis 15%
Residual ripple (3-pin) . . . . .	≤ 10%
Max. load current . . . . .	100 mA
Protection class . . . . .	IP67
Min. load current (2-pin) . . . . .	4 mA
Outlet function (2-pin) . . . . .	NC contact
Outlet function (3-pin) . . . . .	PNP contact

#### Cycle indicator, visual

Ambient temperature range . . . . .	-15 to +75 °C
Weight . . . . .	30 g

<sup>1)</sup> The piston detector is designed for a service life of approx. 10-15 million cycles. This value may be significantly exceeded depending on the application, external environmental influences, medium, pressure, and cycle speed. Please contact the manufacturer if in doubt.

**Note!** Electrical plug and socket connections are ordered separately → page 13.

Sectional metering device VPK with piston detector

Sectional metering device VPK with visual cycle indicator

<sup>1)</sup> The installation of the cycle indicator with or without proximity switch is only possible from feeder section 2T/2S or larger.

# Sectional metering device, product series VPK

Monitoring with cycle indicator and NAMUR proximity switch, for oil and grease

### Technical data

Basis design → Technical data page 6

#### Proximity switch

Ambient temperature range . . . . .	-15 bis +70 °C
Operating pressure max. . . . .	350 bar
Rated voltage . . . . .	8,2 V DC
Internal thread . . . . .	M12×1
Weight . . . . .	30g
Design . . . . .	PVC, with 2 m cable 2x 0.34 mm <sup>2</sup> conducting > 2.2 mA, blocking < 1.0 mA
Power consumption . . . . .	IP 67
Protection class . . . . .	Offner normal geschlossen (NC)
Outlet function . . . . .	

Weight total . . . . . 85 g  
(Cycle indicator, housing, proximity switch)

#### Note!

Use proximity switch only with NAMUR switching amplifier.

### Sectional metering device VPK with proximity switch

<sup>1)</sup> The installation of the cycle indicator with or without proximity switch is only possible from feeder section 2T/2S or larger.

# Sectional metering device, product series VPK

with directional solenoid valve, for oil

With 4/2-directional solenoid valve

With 2/2-directional solenoid valve

## Technical data

### Basis design → Technical data page 6

#### 3/2- and 4/2-directional solenoid valve

Ambient temperature range . . . . .	-15 to +75 °C
Operating pressure max. . . . .	150 bar
Rated voltage . . . . .	24 V DC
Rated current . . . . .	1.3 A
Weight . . . . .	1560 g
Lubricant . . . . .	Mineral oils, environmentally friendly and synthetic oils
Operating viscosity . . . . .	20–1 000 mm <sup>2</sup> /s
Elektrische Bauart . . . . .	Pusher/solenoid
Plug/electrical connection . . . . .	DIN EN 175301-803
ON-time . . . . .	100% ED
Protection class . . . . .	IP65
Design . . . . .	4/2 continuity to feeder normally open (NO); 3/2 continuity to feeder normally closed (NC)

#### 2/2-directional solenoid valve (only for VPKG)

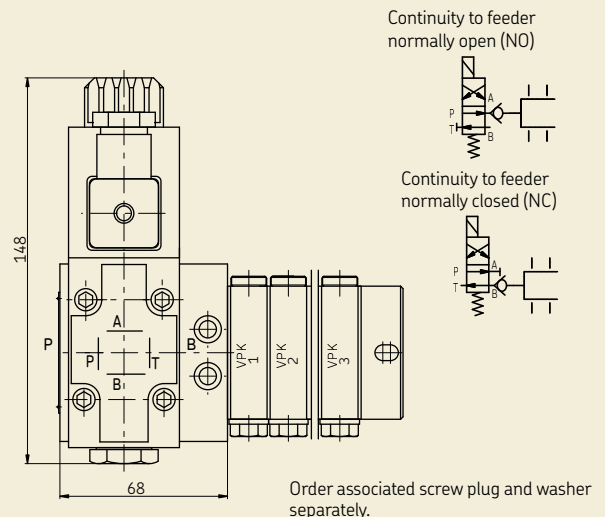

Ambient temperature range . . . . .	-15 to +75 °C
Operating pressure max. . . . .	150 bar
Rated voltage . . . . .	24 V DC
Rated current . . . . .	1.3 A
Weight . . . . .	610 g
Lubricant . . . . .	Mineral oils, environmentally friendly and synthetic oils
Operating viscosity . . . . .	20–1 000 mm <sup>2</sup> /s
Elektrische Bauart . . . . .	Pusher/solenoid
ON-time . . . . .	100% ED
Plug/electrical connection . . . . .	DIN EN 175301-803
Protection class . . . . .	IP65
Design . . . . .	Continuity to feeder normally open (NO)

**Note!** Electrical plug and socket connections are ordered separately → **page 13**.

	$\varnothing 4$ mm quick connector–banjo fitting,	504-108-VS	504-102-VS
	$\varnothing 4$ mm quick connector–banjo fitting, tapered	–	455-531-048-VS
	$\varnothing 6$ mm quick connector–banjo fitting,	506-108-VS	506-140-VS
	$\varnothing 6$ mm quick connector–banjo fitting, tapered	–	455-531-068-VS

<sup>1)</sup>Solderless pipe unions with cutting sleeve acc. to DIN 2353

LL-series = extra-light version, L-series = light version, CV = check valve

Spare parts table 3

Monitoring		VPK (M+G) Order No.
Item	Description	
3, 4	Piston detector, 2-pin (Bipolar) with washer and Adapter	24-0159-6022
	Piston detector, 3-pin (Universal) with washer and Adapter	24-0159-6024
5	Proximity switch housing	VPKM.13
	Screws for housing fitting	DIN914-M4x6-45H
6	NAMUR proximity switch	177-300-075

# Spare parts
