Re: Quality Management System (QMS) – STABILE S.p.A.

Dear Customer,

With reference to your kind request, herewith we inform you that Stabile S.p.A. does not have, now, the qualification ISO 9001 for quality management.

However, Stabile S.p.A. has got all product certifications aimed at marketing its flue systems applying the CE marking.

All products comply with the specific product Standards that – through the number of D.o.p. indicated in each label applied on every product – refer to the new Regulation (EU) 305/2011 in force from 01.07.2013 that repealed the old Directive for construction products 89/106/EEC.

Product Standards provide for the maintaining of the certificate of conformity issued by the Notified Body through the distribution of all documents that set the operating parameters for each certified product, by structuring inside the Company a procedural (QMS) defined as F.P.C. (Factory Production Control). This Manual includes all those procedures and controls aimed at validating the product made on the "product type" tested during the ITT.

Annually, the Notified Body carries out a regular inspection audit during which it checks and categorizes the objective evidences required by the product standard, as well as the application and the maintaining of all the requirements provided by the F.P.C. Manual (QMS). Furthermore, the Notified Body checks the correspondence and the validation of the parameters defined during the ITT for each marked product, the correct CE marking and labelling of all products in order to keep valid all the certificates of conformity in compliance with corresponding Standard.

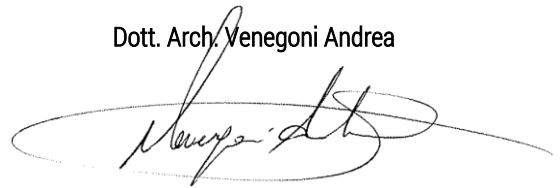

At your full disposal for any further clarification.

Best Regards.
