

TO DO THE CLEANING OF PROFILES AND GLASSES:

Use only non-acidic and neutral products. Do not use de-scaling or acid-based products containing sodium hypochlorite, sodium hydroxide or products not suitable for the cleaning of painted surfaces, including abrasive cleaners, chlorine-based or detergents containing bleach or solvents, as these products may jeopardize the anodized, painted or chromed frame. Do not use abrasive sponges or cloths. The use of these products can cause corrosion and / or the formation of bubbles on painted profiles and damage the silk-printing.
