

## Maintenance tips

*We recommend cleaning our products using a soft, damp cloth and a normal household cleaner. Do not use any aggressive cleansers. Never use rough sponges, abrasives or chemical cleansers which contain acids. Do not use products with a chlorine or hydrochloric acid solution.*

*Stainless steel is best cleaned with a microfibre cloth with glass cleaner or a special cleaning agent for stainless steel.*

*Clean plastic components with a regular detergent.*

*The use of acid (even diluted with water) for the cleaning of tiles and any vitreous china items, may also affect and damage the finish of the objects placed nearby.*
