G1" F-F ball valve wit swivel nut

KIT528R60X

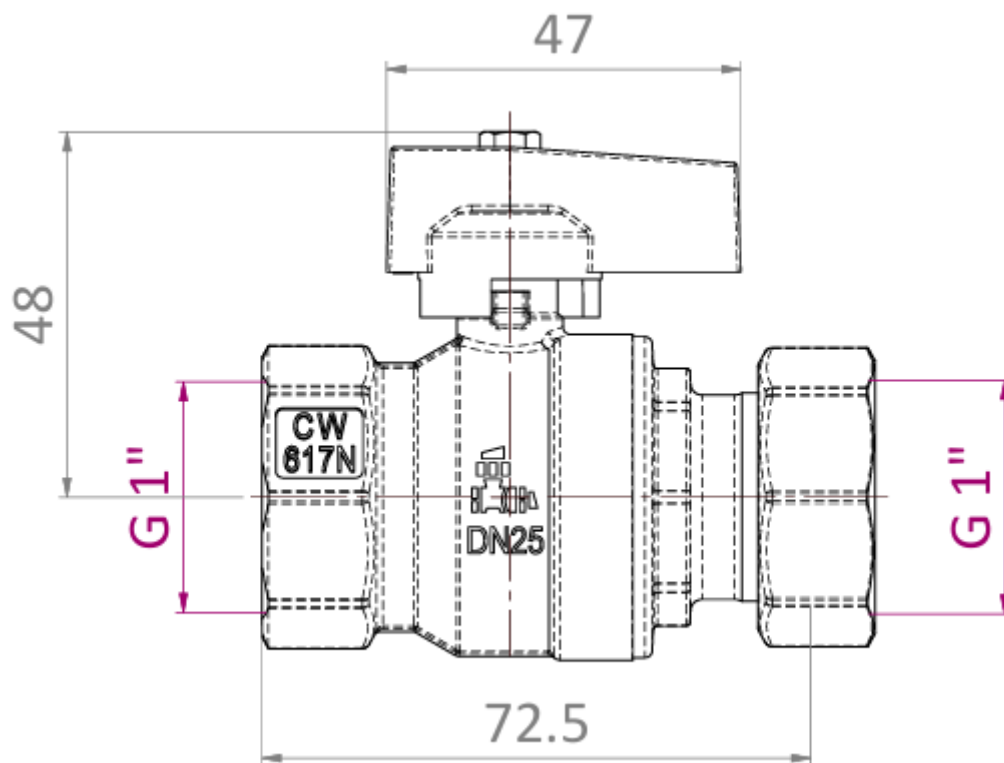

OPERATION

Ball valves are devices used to control the flow of fluids in various industrial, commercial and domestic systems. They are designed to ensure full fluid passage to minimize pressure losses and to withstand high pressures. Ball valves must only be used in the OPEN or CLOSED position (leaving the valve in intermediate positions would cause premature deterioration of the internal seals).

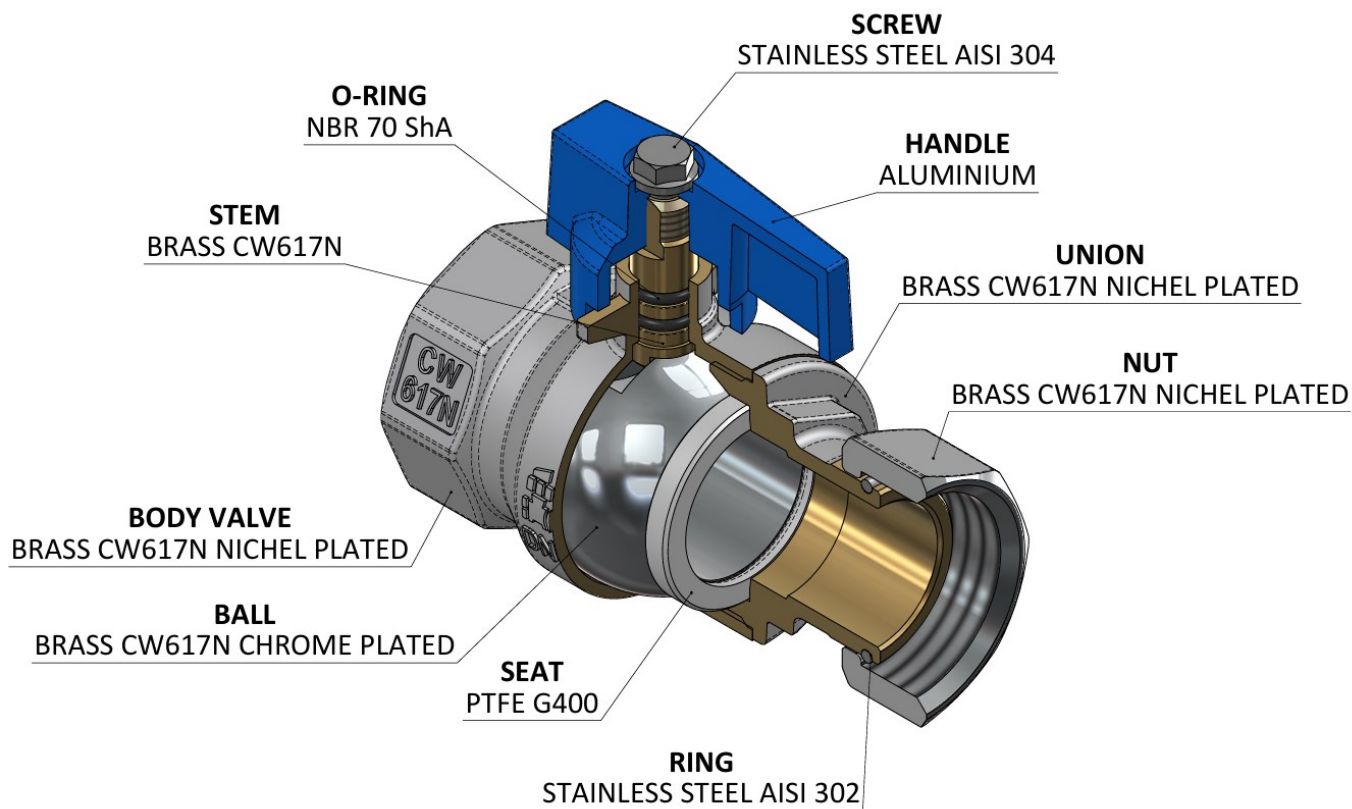

TECHNICAL DATA

Pressure rating:	25 bar
Temperature rating:	0 ÷ +110°C
Flow:	STANDARD (22mm)
Threads:	ISO 228-1 (G 1")
Body and union in forged brass	
Anti blowing stem with double O-Ring protection
